

Save Water Mission 2021-22

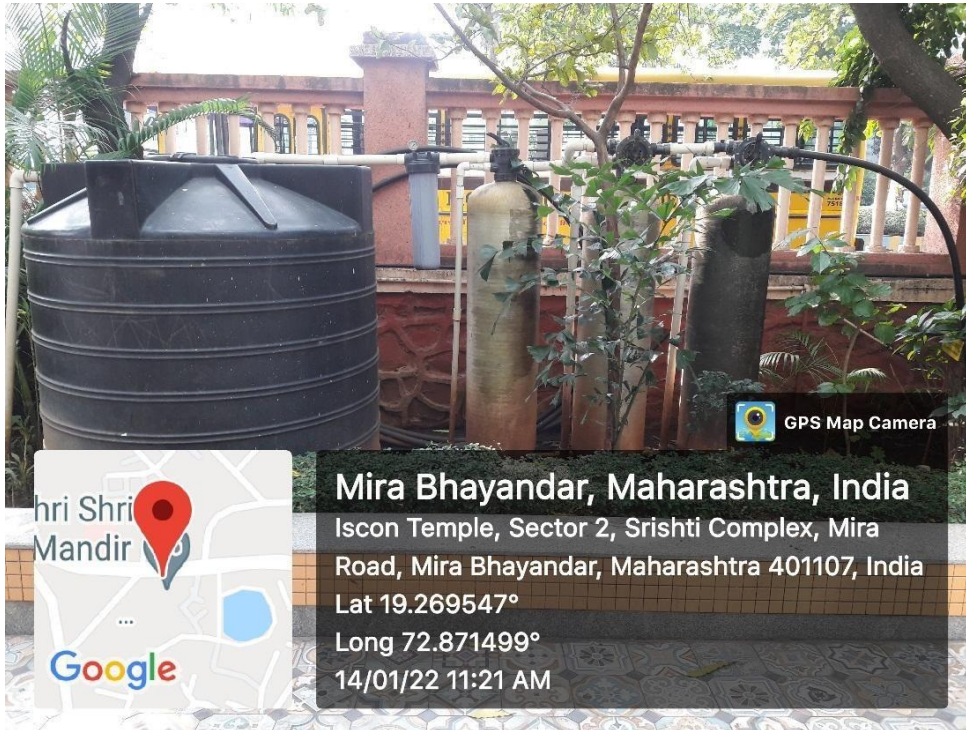

Rain water-harvesting facilities have been installed in the college campus to recharge the underground water table. Rainwater collected from the college terrace is connected to the ring well system of the college. Ring well water is used for washrooms and for cleaning. Municipality water is used only for drinking and lab usage. Ringwell is under Annual Maintenance Contract and the filters and carbon are changed regularly as per need. For watering plants around the campus also this water is used.
